SUMMARY

Senior Data Engineer with **5 years on the core Microsoft Experiences + Devices data team** building infrastructure supporting consumer and commercial advertising events data, attribution, insights and analytics. **7+ years** experience designing and operating highly scalable, reliable, secure, and observable cloud-native data platforms.

SKILLS

Programming Languages: Python, Advanced SQL, C#, TypeScript.

Cloud Platforms: Databricks, Spark, Azure Event Hubs, Azure Data Factory, Docker, ETL/ELT Pipelines, Terraform, Azure Synapse Analytics, Azure Stream Analytics.

Data Storage: Microsoft SQL Server, Azure Data Lake, Azure Blob Storage, Azure Cosmos DB, Azure Data Explorer.

Data Engineering: ETL/ELT, Data Modeling, Data Quality, Validation & Observability, RESTful APIs, LLMs, Agentic AI, PowerBI, Grafana.

EXPERIENCE

AutoComply, Vancouver, BC - Senior Data Engineer

June 2026 - Present

- Automated deployment of Google Cloud Platform data pipelines and cloud functions using Terraform, improving release velocity and platform reliability for downstream consumers.

Microsoft, Vancouver, BC - Software Engineer II

Nov 2020 - Oct 2025

- Led a team of 4 engineers building a multi-agent, LLM-powered reporting system using Azure OpenAI, translating complex operational data into clear service health reports for leadership overseeing 200+ engineers.
- Built and owned a full-stack metadata management web app and API using React, SQL Server, and Azure App Service, standardizing metadata for thousands of ad campaigns and ensuring data accuracy across Microsoft and partner surfaces.
- Built and maintained ETL/ELT pipelines on an internal Spark-based distributed computing platform consumed by 50+ downstream teams, ensuring reliable, well-modeled data for Microsoft Copilot adoption reporting.
- Built a self-service pipeline creation tool that embedded authentication, schema validation, and compliance checks directly into the platform for 50+ downstream data teams, saving hundreds of engineering hours and improving data integrity.
- Designed data quality, monitoring, and observability systems using Azure Data Explorer and Blob Storage, cutting incident investigation time from multiple days to under 3 hours for a shared platform relied on by 50+ downstream teams.
- Partnered with product, analytics, and leadership stakeholders to drive adoption of new platforms like ClickHouse across the organization.
- Built and maintained a metadata management API and web application, partnering with analysts, data scientists, and business stakeholders to translate requirements into reusable data services and reporting models.
- Owned hundreds of Databricks pipelines supporting attribution modeling, deployed through CI/CD pipelines to ensure reliable, repeatable releases.

GlobalFoundries, Malta, NY - Software Engineer

Sep 2016 - Dec 2018

- Designed web applications using SQL, R Shiny, and Python to transform gigabyte scale semiconductor experimental data to actionable insights for researchers and executives.
- Developed automated charting template with R ggplot2, reducing report generation time from hours to minutes.

EDUCATION

Rensselaer Polytechnic Institute (NY, US) - Master's in Electrical Engineering

Aug 2014 - May 2016

Vanderbilt University (TN, US) - Bachelor's in Electrical Engineering

Aug 2011 - May 2013

Fisk University (TN, US) - Bachelor's in Computer Science

Aug 2008 - May 2011
